EXPERIENCE

Research Assistant | C-BED, New Mexico State University

(Aug 2024 – May 2026)

- Designed and implemented an automated **data pipeline** integrating **REST APIs** with **Power BI**, enabling real-time refresh of **15+** trade statistics dashboards without manual intervention
- Reduced frontend load times by **20%** through **lazy loading**, **API response caching** via interceptor, **WebP** image optimization, bundle size reduction, and deferring non-critical scripts

Full Stack Web Developer | Inncircles Technologies

(July 2021 – December 2023)

- Tech-led **5 developers** across mobile, web, and backend, independently designed the architecture, split workstreams, and made all technical decisions delivering a major release **1 week ahead of schedule**.
- Constructed **MongoDB aggregation pipelines** processing **500,000+** worklog documents and **Python/Node.js** scripts recovering **1M+** corrupt records, cutting downtime by **35%** and manual intervention by **3 hrs/week**.
- Architected a **distributed Redis caching layer** across multiple servers with write-first persistence to **MongoDB** every hour, ensuring low-latency reads for **5,000+ users**.
- Built a **real-time notification system** via **WebSockets** delivering **400+ notifications/day** with granular user preferences (email, in-app, push) and a **background interceptor** caching **Power BI** visuals in Redis during low-traffic periods.

Software Developer Intern | Yellow.ai

(Apr 2021 – July 2021)

- Developed** and deployed enterprise-grade customer support chatbots using **Node.js**, automating responses for frequent user inquiries and increasing support team operational efficiency.

PROJECTS

Stems | (React Native, Fast API, Firebase, Redis, Kotlin, Swift) [Github](#)

- Shipped a full-stack music streaming platform combining core capabilities of Spotify and YouTube Music. Delivered hardware-backed **zero-trust security** with cryptographic **device fingerprinting**, **MFA** (TOTP, OTP, Codes), **Passkey** verification and an **integrated audio engine** featuring real-time miniplayer state controls
- Implementing a self-built AI recommendation engine using **cosine similarity** and **collaborative filtering** trained on the **Million Song Dataset** without any third-party ML APIs.

Comparor | (MERN) [Github](#) | [Live](#)

- Full-stack **MERN web application** with JWT auth, refresh token rotation, password reset, and user/device abuse reporting.
- RESTful APIs with Node.js/Express.js serving MongoDB data with dynamic filtering and responsive React.js.

EDUCATION

New Mexico State University

Master of Science in Computer Science

(Aug 2024 - May 2026)

Sreenidhi Institute of Science and Technology

Bachelor of Technology in Information Technology

(Aug 2017 - July 2021)

SKILLS

- Languages:** Python, C++, JavaScript (ES6+), Java, SQL, HTML5, CSS3/SCSS
- Frameworks & Libraries:** React.js, Angular, Node.js, Express.js, React Native, Fast API
- Databases:** MongoDB, PostgreSQL, MySQL, Firebase, Redis
- Cloud & DevOps:** AWS, Heroku, Render, Docker, GitHub Actions, CI/CD
- Tools:** Git, Postman, Jest, WebSockets, REST APIs, Agile/Scrum
